of building area

2019, launch
of the 3rd version
Kit compatible with the first
versions

Air distribution done through posts inside the room

Individual motor actuated by independent rod assembly

+ Security

FIRE HAZARD

- > The air flow is generated inside the concrete
- > No risk of combustion
- > Air inlet and outlet at ground level
- > No air spreading in the attic

SANITARY SECURITY

- > One ventilation management per room
- > One inlet & outlet per room
- > Secured air input > No competition between rooms

+ Energy

- > Proportional Air inlet in relation to the needs
- > Regulated temperatures
- > Cellar effect > temperate air inlet in summer
- > System adapted to every physiological stages
- > Ventilation control > Energy's cost control
- > System adapted to the rooms' size
- > No calories loss > Adapted to the animals' needs

+ Air quality

- > Air is taken directly from the outside
- > Fresh, clean air intake
- > No dust incorporated in the circuit
- > Ventilation without any draft > Reduction of animals' lung diseases
- > Well divided air inlet, no matter the temperature
